

ARPIT PANDEY

DIGITAL ASSET RESEARCH • ON-CHAIN ANALYTICS • DEFI / MARKET STRUCTURE • PYTHON • SQL • ETHEREUM

New Delhi, India | +91-7881157919 | arpitpandey2040@gmail.com | [GitHub](#) | [Portfolio](#) | [LinkedIn](#) | [Dune](#)

PROFILE

Financial-operations analyst at S&P Global with public proof-of-work in digital-asset research, on-chain analytics, stablecoin settlement controls, and Ethereum protocol verification. Builds reproducible Python/SQL systems that turn blockchain and market data into tested hypotheses, benchmark-adjusted outcomes, liquidity/volatility context, and auditable evidence. Brings institutional reconciliation, exception-investigation, data-quality, and automation discipline to crypto/DeFi research.

DIGITAL ASSET RESEARCH & SYSTEMS

Crypto Research Engine | Python • Ethereum RPC • SQLite • Streamlit • CI | [GitHub](#) | [Research Note](#)

- Built an end-to-end whale-flow research engine that scans Ethereum transfers, persists real data, normalizes flows to USD, and combines BTC/ETH price context with rolling net-flow signals, event-time volatility, and DEX-liquidity context.
- Added +6h/+24h BTC-benchmark-adjusted outcome validation and cost-aware backtesting (signal at t, position at t+1); current public repo reports 214 tests, 91% coverage, and green CI, with failed signals and data limitations preserved rather than hidden.

Institutional Digital Asset Control Plane | Python • Base • USDC • ERC-20 • JSON-RPC | [GitHub](#)

- Built a Base/USDC direct-transfer settlement-assurance MVP comparing modeled expected instructions with public on-chain evidence across 10 independent PASS/FAIL/UNKNOWN controls.
- Implemented RPC-derived chain/execution evidence, token contract/sender/receiver/raw-amount checks, protocol-aware finality, duplicate/replay controls, canonical-asset validation, and auditable orchestration; 64 unit tests passing.

WETH9 Large Deposits - Event-Level Verification | Dune SQL • Ethereum • Protocol Evidence | [Dune](#) | [Case Study](#)

- Verified 135/135 successful native-ETH WETH9 calls of at least 1,000 ETH against Deposit events, exact-wei value equality, and sender/destination consistency; isolated 7 trailing-calldata calls into 3 observed byte patterns without unsupported attribution.

Additional research: Crypto Data Foundation (reproducible data spine) • DeFi Tokenomics Dashboard (AAVE/UNI/COMP + TVL/market data) • Crypto Volatility Regime Classifier (walk-forward XGBoost/SHAP) • Digital Assets Index Lab

PROFESSIONAL EXPERIENCE

S&P Global | Operations Analyst, Tax Utility

Feb 2025 - Present

- Execute controlled institutional tax-document and withholding workflows (~40-50 forms/day; ~1 remediation file/week), reconciling entity/document/withholding mappings, investigating exceptions, and coordinating remediation across Operations, Client Support, Client Services, and Reporting.
- Built a Python + Streamlit document-automation platform used by a 24-person team for PDF merge/split, OCR/PDF-to-Excel extraction, document organization, and withholding ownership calculations; outputs are team-QA validated before operational use.
- Use SQL/PostgreSQL, DBeaver, Excel/Power Query, and master workbooks for data validation, reconciliation, mapping checks, root-cause analysis, and issue closure; also built an SOP-grounded AI process assistant adopted by own and adjacent teams.

Quess Corp | Financial Analyst - S&P Global

May 2024 - Feb 2025

- Supported controlled financial-data workflows across source validation, reconciliation, exception investigation, remediation, reporting, and SQL/Excel-based analysis; maintained traceable evidence and resolved document/data breaks.

Earlier experience: Pyramid IT Consulting | Talent Acquisition Specialist | Dec 2022 - Jun 2023

TECHNICAL SKILLS

Digital Asset Research: On-chain analytics, whale-flow & liquidity analysis, BTC benchmark-adjusted outcome validation, DeFi tokenomics, protocol verification, Dune SQL, digital-asset index research

Blockchain & Data: Ethereum, Base, USDC, ERC-20 logs/events, EVM/JSON-RPC, Python, SQL, PostgreSQL, SQLite, pandas, NumPy, Streamlit, Git/GitHub Actions, pytest/unittest, CI; Solidity/Foundry (foundational), Chainlink

Controls / Operations: Reconciliation, finality, duplicate/replay, canonical-asset validation, PASS/FAIL/UNKNOWN evidence handling, exception management, QA, root-cause analysis

EDUCATION & CREDENTIALS

BBA, PSIT College of Higher Education (2020-2023) | Diploma in Network Administration, Jetking Learning Institute (2020) | Selected certifications: Google Data Analytics, Blockchain Basics, Python, SQL, Statistical Analysis
